

Guide for authors

The *Revista UNIMAR* is an open-access scientific journal, which is framed within the Social Sciences and the Education area with an emphasis on pedagogy. It is published by Editorial UNIMAR of the Universidad Mariana, Nariño, Colombia, and is aimed at researchers, academics, authors, and readers, both national and international. The journal is published every six months; its purpose is the publication and dissemination of articles in Spanish, English, and Portuguese, mainly in the following typologies: a) research, b) reflection, c) review, and (d) short articles. The costs of the editorial processes and procedures are assumed by the publishing entity.

Types of articles published in the journal

The *Revista UNIMAR* focuses its essential function on the publication of original and unpublished articles resulting from research.

Research article: a document that presents original and unpublished scientific, technological, or academic production and, in detail, the original results of research processes. Preferably structured as follows: Introduction, Methodology, Results, Discussion, Conclusions, and References.

Reflection article: a manuscript that presents research results from an analytical, interpretative, or critical perspective of the author, on a specific topic, using original sources.

Review article: manuscript resulting from research, which analyzes, systematizes, and integrates the results of published research on a field of study, to give an account of the advances and tendencies of development. It is characterized by a careful bibliographic review of at least 50 references from primary sources.

Short article: brief documents that present original, preliminary, or partial results of a research that, in general, require prompt dissemination.

Case reports: documents that present the results of a study on a particular situation, to make known the technical and methodological experiences considered in a specific case; includes an annotated systematic review of the literature on analogous cases.

Topic review article: document resulting from the critical review of the literature on a particular topic.

Letters to the editor: critical, analytical, or interpretative positions on the documents published in the journal that, in the opinion of the Editorial Committee, constitute an important contribution to the discussion of the subject by the scientific community of reference.

Editorial: document written by the editor, any member of the Editorial Committee, or by a person invited by the editor. The editorial may be related to current problems or new findings in the field of action of the journal.

Conditions for the submission of the manuscript

For the submission of manuscripts, it is necessary to prepare the document according to the type of articles that the journal requires; therefore, those nominations that do not meet the declared conditions will not be considered for publication.

The opinions and affirmations present in the articles are the sole responsibility of the authors, understanding that sending the manuscript to this journal commits them not to submit it partially, completely, simultaneously, or successively to other journals or publishing entities.

Likewise, the authors must declare that the contents developed in the manuscript are their own and that the information taken from other authors and published works, articles, and documents is correctly cited and verifiable in the bibliographical references section of the text.

All manuscripts that are submitted for publication in the journal must follow the guidelines specified in this guide, which, for the most part, have been adapted from the Publications Manual of the American Psychological Association APA 7th edition. In addition, the title, abstract, and keywords must be presented in Spanish, English, and Portuguese.

Manuscripts to apply must be sent through the Open Journal Systems (OJS), the system of the journal page <https://revistas.umariana.edu.co/index.php/unimar>, prior user registration -author- on this platform, once all the above requirements and those of composition presented below are met:

In both options, the author will be notified of the receipt of the article within a maximum period of ten days after sending it and the status of the article will be reported within a maximum period of two months.

The magazine manages an open call that receives articles permanently; that is, the moment the sending is made, the evaluation process begins. The number and date of publication will depend on the order of arrival or entry of the articles to the journal and on the completion of the evaluation process.

To formalize the receipt of the article, the author(s) must send the following forms duly completed:

Format 1. Declaration of conditions: a letter stating that the article is original and unpublished and that it has not been partially, completely, simultaneously, or successively sent to other journals or publishing entities (it must be completed by each author). <https://revistas.umariana.edu.co/index.php/unimar/libraryFiles/downloadPublic/65>

Format 2. Identification of author and research: document where the required data is recorded about the authors, typology of the postulated manuscript, and nature of the research or the process for the configuration of the article (must be completed by each author). Link: <https://revistas.umariana.edu.co/index.php/unimar/libraryFiles/downloadPublic/63>

Format 3. Partial use license: a document authorizing Universidad Mariana, specifically Editorial UNIMAR, to exercise over the postulated manuscripts, attributions aimed at disseminating, facilitating, promoting, and deconstructing knowledge and knowledge, the product of research, review processes, and reflection that the work expresses. Link: <https://revistas.umariana.edu.co/index.php/unimar/libraryFiles/downloadPublic/67>

General aspects: the applicant manuscripts must be submitted in the Microsoft Word program (download Template), one column, on letter size paper with equal margins of 2 cm, using the typefaces specified in the template, with single spacing (1.0) and a maximum length of 7,500 words, including figures (images, graphs, and photographs), tables and references.

Title: it will be clear, concrete, and precise; it will have a footnote where the characteristics of the investigative, review, or reflection process developed for the concretion of the scriptural contribution are specified; in this note, the type of article and the title of the research from which it is derived must be classified; likewise, the name and funding source of the research or project from which the article derives.

Example footer: this article is the result of the investigation entitled: Oral argumentative competence in primary school students, developed from January 15, 2009, to July 31, 2011, in the township of Genoy, department of Nariño, Colombia.

Author(s): the name of the author(s) must be located under the title of the manuscript and, at the bottom of the page, the following data for each case: academic level –the highest degree achieved, with the respective granting institution–, institutional affiliation –full name of the work institution–, contact information –email, personal and institutional, city, department, province, country of residence–, the ORCID code and the link to the Google Scholar profile. It must be taken into account that the first author will be the one who will be registered in the databases of the different indexing and summary services. It is essential to indicate the author who will be in charge of receiving and sending the correspondence; otherwise, it will be assumed that the first author will take over this function.

Example: Pepito Alfredo Pérez Rodríguez¹

¹ PhD Candidate in Education (Universidad de San Buenaventura). Director of the Universidad Mariana Research Center. Member of the Forma research group. Email: pperezr@umariana.edu.co ORCID code: <https://orcid.org/0000-0002-1369-0199>. Link Google Scholar: <https://scholar.google.es/citations?user=xwTivN0AAAAJ&hl=esp>

Contribution: the level of writing contribution of the article and the aid of each one of the authors are identified, to establish the order of appearance.

Example:

Pepito Pérez Buriticá: Principal investigator. Statistical data processing, writing of materials and methods, and obtaining the results.

María Chamorro Solarte: Analysis and interpretation of results, writing of the introduction, methods, discussion, and conclusions.

All the authors participated in the preparation of the manuscript, read it, and approved it.

Abstract: it will include the main objectives of the investigation, the scope, the methodology used, the most outstanding results and conclusions; therefore, this section will be clear, coherent, and concise, and will not exceed 250 words.

Keywords: a minimum of five keywords and a maximum of ten will be admitted, which will make it possible to locate the content of the article thematically; they should be relevant and help cross-indexing since, through them, the work will be easily identified by database search engines; they are separated by semicolons. Preferably, use descriptors such as Desc, Mesh, and UNESCO Thesaurus, among others.

In the case of manuscripts resulting from research, these will be structured as follows:

Introduction: where the problem or objectives of the investigative process are mentioned, alluding to the possible background on which the investigative work is based; likewise, the type of methodology used is commented on, a justification for its choice, as well as the pertinent and precise inclusion of the bibliographic support that theoretically supports this first approach to the content of the manuscript.

Methodology: this section mentions the design, techniques, and materials used to obtain the results; it is recommended to develop it descriptively, indicating all the aspects conceived at the time of carrying out the process; that is, clearly expressing the type of design and sampling that were used. It is convenient to refer to the statistical techniques and other instruments used to collect the information – this section must be written with verbs in the past tense.

Results: this section presents the results of the investigative process; specifically, the contribution made to new knowledge, where the coherence between the objectives set at the beginning of the investigation and the information obtained through the collection instruments are evident. It is advisable to mention all the important results obtained, even those that are in opposition to the hypothesis that supported the research.

Discussion: in this section, there are those relationships, interpretations, and recommendations, that the results obtained indicate, in parallel with other investigations, backgrounds, and theories related to the topic addressed.

Conclusions: they are presented in a clear, concrete, and coherent way with the themes developed in the manuscript; therefore, they will have precise arguments that justify and validate each one of them.

Figures and tables: in the case of figures (graphs, diagrams, maps, drawings, photographs, and illustrations), they must be located in the respective place within the text; they will be numbered and described with a legend at the top left that begins with the word **'Figure'**, where the content of the elements arranged therein is briefly stated, in italics and without a final point. In the case of tables, they must contain -preferably- the quantitative information mentioned in the text; they are numbered and will have a descriptive legend located in the upper left part of the element, which will begin with the word **'Table'**; its description must be in italics and without a period. Tables are not accepted as images; they must be inserted in the file. For all figures and tables, the source from which they are taken will be indicated; please, refrain from locating material that does not have the written permission of the author and the participants (**attach the signed consent**), as well as the quality and readability. Use the figures and tables only when necessary, without redounding the information they express with the textual content; likewise, they will be self-explanatory, simple, and easy to understand. The figures must be sent in independent files with a minimum of 300 dpi in JPG or PNG format.

Conflict of interest: the authors must declare if they have financial conflicts (financial aid: money, payments in kind, or any type of aid), personal (friendship or enmity), political (party membership), intellectual (disagree with the editorial line of the magazine), racist, religious, among others, that could compromise the reliability of this publication.

Ethical responsibilities: research involving human beings must be carried out ethically and have duly completed informed consent. A statement of approval from the Ethics or Bioethics Committee or, whoever acts as such in the institution, must be included, as well as a brief description mentioning how and from whom consent was obtained.

Quotations

Quotation Type	Format and example	
Quote of fewer than 40 words	With an emphasis on the quote:	"Quote" (Author, year, page)
	A situation of variation is "both a scenario in which the elements on the scene change over time" (Acosta, 2004, p. 112), as well as those circumstances where the change of state is related...	
	With an emphasis on the author:	Author (year, page) "quote"
Quote of more than 40 words	A situation of variation according to Acosta (2004, p. 112), is "both a scenario in which the elements on the scene change over time" as well as those circumstances where the change of state is related...	
	With an emphasis on the quote:	"Quote" (Author, year, page)
	As the trial took place in the defendant's absence, the judge ordered a picket of soldiers to take Mr. Miño to prison, but he had traveled to Lima a few days before.	
	The second jury, when the time came for the classification of the crime, said: the jury of the qualification declares Dr. Domingo Miño guilty of the violation of article 759 of the Penal Code in the first degree. The judge accepted the previous verdict and sentenced Dr. Miño. (Ortiz, 1975, p. 213)	
	With an emphasis on the author:	Author (year, page) "quote"

	Since the trial took place in the defendant's absence, the judge ordered a picket of soldiers to take Mr. Miño to prison, but he had traveled to Lima a few days before; in this sense and, according to Ortiz (1975):	
	The second jury, when the time came for the classification of the crime, said: the jury of the qualification declares Dr. Domingo Miño guilty of the violation of article 759 of the Penal Code in the first degree. The judge accepted the previous verdict and sentenced Dr. Miño. (p. 213)	
Paraphrase	With an emphasis on the quote:	"Quote" (Author, year, page)
	Information is becoming increasingly relevant, as an asset for companies and institutions, whether public or private; but, this is not obtained already 'elaborated', but is obtained in the form of data, which must be registered through transactional systems or spreadsheets and, later, analyzed, to obtain useful information for the company or institution (Vargas, 2016).	
	With an emphasis on the author:	Author (year, page) "quote"
	In this sense, for Vargas (2016), information is becoming increasingly relevant, as an asset for companies and institutions, whether public or private; but, this is not obtained already 'elaborated', but in the form of data, which must be registered through transactional systems or spreadsheets and, later, analyzed, to obtain useful information for the company or institution.

	When there are two or more authors, the last name of the first is cited followed by "et al."	Hernández et al. (2022) affirm...
	When dealing with a corporate author, the name of the organization and the acronym are cited the first time; the second time, only the acronym is used.	The World Health Organization (WHO, 2022), affirms that...

References

It is the last section of the manuscript. All cited references should appear here; their order will be established alphabetically and following the provisions of the Publications Manual of the American Psychological Association APA 7th edition. 60% of the cited material must not be more than five years old.

Next, the types of sources most used when structuring a scientific manuscript are presented, as well as the format and corresponding example for each case. It is recommended to include the DOI of those articles, books, or book chapters that are available online.

Font Type	Format and example
Single printed book	First last name, Initial of the name. (Date of work). Qualification. Editorial. Mora, J. (2013). <i>Research dilemmas</i> . UNIMAR.
Collaborative print book	First Last Name, First Initial.; First last name, Initial of the name. and First Last Name, First Name Initial. (Date of work). Qualification. Editorial. Mora, J., Martínez, G., & Fernández, A. (2012). <i>Creative thinking</i> . ECOE Ediciones.

Editorial and peer review process

With the prior authorization of the author(s), the pertinent adjustments to the manuscripts will be made, to give greater precision, clarity, and coherence to the applicant's written proposal, for which all those interested in sending their contributions are requested to write with as rigorously as possible, duly using the spelling and grammar rules of scientific writing, structuring the manuscript in general, through clear, coherent, and objective paragraphs. It is suggested to avoid redundancies, repetitive use of expressions, concepts, and terms "among others" and, similarly, avoid the unnecessary use of acronyms.

Being a refereed journal, rigorous evaluation and validation processes are carried out on the applicant manuscripts, so the estimated time for the optimal development of these processes and procedures is between two and five months, depending, of course, on the quantity and quality of the postulated manuscripts.

In the first instance, the Editorial Committee of the journal decides on their acceptance or rejection, based on compliance with the policies, criteria, provisions, and conditions that the publication has established for the initial acceptance of the written contributions -manuscript evaluation process by the Editorial Committee and results of the submission to the coincidence software implemented by Editorial UNIMAR-. Both affirmative and negative provisions will be communicated to the authors, who will know the reasons why the manuscript was accepted or rejected.

In the second instance, the editor of the journal, together with the Editorial Committee, selects those manuscripts that meet the qualities required by the publication, classifying them later according to their area and theme addressed, to assign two peer reviewers, in coherence with the evaluation system adopted by the journal, -double-blind-, who, through the evaluation format provided for the said procedure, will make the observations and suggestions that may arise, expressing whether it can effectively be published, if certain elements need to be improved for possible publication or, conversely, it is not accepted for publication in the journal. The Editorial Committee receives the concepts of the peer reviewers and makes the arrangements regarding the final publication of the article.

The editor sends each peer reviewer the Guide for peer reviewers of the journal and the review format corresponding to the submitted manuscript (research, review, or reflection article). For the opportune development of the evaluation process, each of them is assigned a period between two and three weeks to prepare and submit the concept. It is worth mentioning that, in the evaluation format, they are asked to indicate whether the manuscript meets the conditions and criteria, both in terms of form and content, required by the journal. In addition, they will elaborate a general concept about the manuscript, where they include suggestions, observations, and contributions; subsequently, they may recommend the publication of the manuscript, either without any modification, with some modifications, with profound modifications, or it will not be published at all.

Therefore, in the evaluation format provided by the journal, the peers are asked if they are willing to re-evaluate the manuscript if the authors make the adjustments and observations that have been commented on, to continue the process, until the manuscript is an article with all the quality conditions to be published.

Once the editor receives the concepts from the two peer reviewers, he/she prepares a detailed report of the review process to send to the authors; said report compiles the observations and suggestions of the peers, of course, suppressing all information that could reveal and identify them. When the authors already have the evaluation report of their postulated manuscript, they will decide if they present it again with the modifications and adjustments that the peers refer to submitting a new version of their writing or, on the contrary, they definitively withdraw it from the process. If the authors decide to submit the improved version of the text again, the editor assigns a fair date -according to the modifications, corrections, and adjustments- for the delivery of this second version of the manuscript. If the authors decide not to continue with the publication process of the manuscript, it will be removed from the journal's database.

In the case of manuscripts completely rejected by the peer reviewers, the authors will be informed that their manuscript will be withdrawn from the process and the journal's databases; additionally, they will be sent the evaluation report with the concepts that the peers determined for making this decision.

Once the authors have sent the second improved version of the manuscript, taking into account all the observations, adjustments, and other suggestions made by the peer reviewers, the editor sends the latter the second version, to check whether the changes, adjustments, and suggestions were made by the authors, requesting their evaluation and stating to the editor if it is in optimal conditions to be published without any other modification or, on the contrary, the writing will have to be adjusted again, as long as its publication is desired.

For the final preparation of the manuscript, the editor receives the concepts from the peer reviewers. If the two peers consider that the manuscript can be published, the editor sends these concepts together with the final version of the manuscript to the Editorial Committee, to verify the rigor and quality of the process and, likewise, determine the acceptance or rejection of the manuscript for publication. It is worth mentioning that, if the concepts of the two evaluators regarding the manuscript are contradictory and controversial, a third evaluator will be appointed to issue a concept that allows for solving said impasse. On the other hand, if one of the peer reviewers considers that the manuscript is not yet ready for publication, the editor will send new observations and recommendations of the manuscript to the authors, until the manuscript is ready.

The authors may respond to the comments and observations made by the peer reviewers, to give an explanation and justify that some suggested adjustments will not be taken into account, for which a blind dialogue will be established between

authors and peer reviewers, to discuss the relevance of the observations and suggested adjustments, of course, mediated by the Editorial Committee of the journal.

In addition to the above, it should be noted that, before publication in the journal, the galley proofs will be sent to the authors, who will review the layout of the article. It is necessary to clarify that at this stage new paragraphs, phrases, or sections to be added will not be accepted, since the process will only be limited to correcting possible typing errors so that they contribute to the improvement of the final version of the magazine.

The journal has the Open Journal Systems (OJS) system <https://revistas.umariana.edu.co/index.php/unimar> through which authors can be aware of the status of their manuscript since it enables effective management and efficiency of editorial processes and procedures. Likewise, if they wish, they can request information via email: editorialunimar@umariana.edu.co

Writing calls

At any time of the year, authors can submit their manuscripts for possible publication in the journal.

Considerations

Those authors who publish their articles in the journal will receive notification of the publication and access to the electronic version. In the case of peer reviewers, in addition to receiving a copy of the electronic magazine, they will also have a certificate of their participation as reviewers.

Additional Information

The journal is managed through OJS <https://revistas.umariana.edu.co/index.php/unimar> where all the information concerning the journal is located (e-ISSN – ISSN-L). It is essential to point out that at these addresses you can download the 'Guide for Authors', the 'Template', the 'Author and research identification form', the 'Declaration of Conditions', and the 'Partial use License', documents and fundamental formats in the process of submitting the manuscript for evaluation.
